

The International Research Interdisciplinary Schools

IRIS 2019

The IRIS program provides an environment for developing skills to carry out research projects, based on a practical, problem-based approach; and to establish enjoyable cross discipline/cross cultural collaboration. The overall “*University without Walls*” program is based on creating links among participants to build a network for the dissemination of the experience and skills acquired during the IRIS to establish a working environment for emerging bio-medical scientists through collaboration on common projects. The program of the IRIS is flexible to include *ad hoc* topics that can arise during the discussion, such as preparation of manuscript of a scientific paper, the communication with the editorial office of scientific journals, the review process, how to deal with the reviewers’ comments and many others.
